## **Continuation Sheet (PTO-303)**

Continuation of 13. Other: The Applicant's arguments are considered not persuasive. The Applicant argues that for Boehm to anticipate lines 7-9 and 13-14 of Claim 1, it would require that its network controller 30 build the software application, but it cannot. The Examiner respectfully disagrees. Although the claims are interpreted in light of the specification, limitations from the specification are not read in the claims. The features of Claim 1 recited in lines 7-9 and 13-14 do not require a second computing device to build a software application as stated by Applicant, instead, Examiner interprets the claim language to mean that an application is to be built on the device but not necessarily by the device. Thus Examiner points to Boehm FIG. 2, step 300, and related text, where the first computing device is network controller 30 and the second is workstation 10.

Furthermore, Applicant argues that Boehm does not anticipate line 12 of Claim 1. Examiner respectfully disagrees and would like to direct Applicant's attention to FIG. 2, step 300, and related text, where the second computing device is workstation 10. See also Boehm, column 8, lines 26-41, "...build list...".

Lastly, Applicant argues, on page 10 of the Remarks section, regarding Claim 1, that that there is an element of "deleting said at least one group of servers" which is a step removing previous environment parameters and configurations that could create errors in a new build. Again, the Examiner would like to say that although the claims are interpreted in light of the specification, limitations from the specification are not read in the claims. Examiner would like to point to Boehm FIG. 9, step 468, and related text which anticipates deleting said at least one group of servers in the environment as disclosed in claim 1 of the present invention.

Regading Claim 2, Applicant argues that Boehm is silent to an environment-configuration file, however, Examiner would like to direct Applicant's attention to Boehm column 5, lines 30-43 which is a central network controller which is in control of a file server that contains configurations for the system (i.e. environment).

In regards to Claim 8, Examiner contends that one of ordinary skill in the art could reasonably interpret a build schedule to include a build list. Thus .Examiner points to Boehm FIG. 4, step 100, step 202, and related text.
